MEYCO® Data

Easy record of operational information!

Data exchange with fixed compiling unit in the electric cabinet of MEYCO® Suprema, Potenza, Roadrunner, Cobra together with external data reader.

The production data of the machine will not only appear on the display but can easily be transferred to a PC for evaluation using the industrial grade PC card. The evaluation software, included in the delivery package, enables the analysis and presentation of recorded data either in the form of tables or diagrams. Various export formats allow further evaluation and archiving possibilities.

- e.g.
- effectively conveyed amount of concrete and accelerator per time unit
 - protocol of set dosage recipe (dosing percentage, cement content etc.)
 - total conveyed amount of concrete and accelerator within a specific time period
 - summary of fault reports with details of time and date

MEYCO® Data provides a tool whereby an important and valuable machine history can be established. Analysis of compiled data leads to better quality of sprayed concrete and more efficient cost management.

System requirement:

All operating systems for which JRE version(s): 1.4.2_xx or later is available
eg. Windows 98/ME/2000/XP/Vista, Linux, OS X and others.
